Revolutionary Product Offers Hands-On Training Opportunities

The [EnduraMax](#) High Performance Wall System team is travelling the country to offer training opportunities for both sales representatives and contractors, incorporating a combination of classroom and hands-on [installation](#) instruction. Classroom sessions include education on the various [components](#) of the EnduraMax system and product benefits in relation to new energy codes. The hands-on portion includes training on tools required, foam panel installation, stone insertion, finishing best practices, injectable mortar application, and a variety of tips and techniques to increase efficiency.

Learn first-hand how the revolutionary EnduraMax system both reduces labor time and increases masonry construction efficiency by offering an unmatched [R13.6 insulation barrier](#), increased acoustical comfort, and built-in moisture management...all in a single simple-to-install system.

.

For information on upcoming training sessions or to schedule a session in your area, contact one of the following team members:

EnduraMax Supports Safari Schoolhouse Project

[EnduraMax](#) is proud to be a partner of the Safari Schoolhouse in Phoenix, AZ, which is nearing completion and preparing to open in September. The first in the [Green Schoolhouse Series](#), the Safari Schoolhouse was built with donated volunteer man-hours and materials, replacing a blighted low-income Title I elementary public school, and is on target to be the first LEED® Platinum school with goals of net-zero energy and water use. The EnduraMax wall system contributes to these energy goals by offering an unmatched [R13.6 insulation barrier](#).

EnduraMax [Morency Stone](#) was installed throughout the campus, with applications including exterior facades, interior accent walls, column wraps, parapet walls, and garden walls.

EnduraMax IECC CEU Course Now Available Online

The [EnduraMax](#) High Performance Wall System team developed a new AIA approved CEU course reviewing the 2012 International Energy Conservation Code® (IECC) in relation to exterior wall compliance and how insulated masonry systems can improve thermal performance to meet today's codes and energy initiatives. The course also covers information on the IECC adoption status of various states across the nation.

This new CEU course was published in the June issue of [Architectural Record](#) with an online credit quiz available to subscribers. The course is also available as a Lunch & Learn class.
